

Press Release – 24th February 2014

Technology Crops Ltd Celebrates Ten Years of Speciality Cropping

From its launch on the 25th February 2004, Technology Crops Ltd has grown from a small business based in Essex to a national company with 7 employees, selling speciality oils such as Borage and High Erucic Acid Rapeseed (HEAR) to customers around the globe.

“Few companies in UK agriculture can boast the growth rate and performance that Technology Crops have achieved in such a short period of time” says company Managing Director, Steve Timms.

As a member of the Technology Crops International group of companies, Technology Crops Ltd is part of a global company working with eight different crop species, supplying the food and non-food sectors with vegetable oils to meet the exacting standards of quality and specification demanded by industry in the 21st century.

“Since its inception, Technology Crops has always strictly adhered to a philosophy of ‘*From Soil to Oil, Naturally*’ linking plant breeders with industrial oil buyers and end users, forming valuable partnerships with growers, crushers and logistics suppliers along the way.” says Mr Timms.

Later this year, the company is looking forward to; the launch of Ahiflower™, a brand new, high Omega-3 oil crop; the inauguration of a Speciality Growers Club for all of the Technology Crops contract growers, with access to regular newsletters, special agronomic advice plus the Technology Crops speciality crops trials; and the imminent launch of the harvest 2015 “*High Rewards - Minimum Risk*” HEAR rapeseed contracts, which will be very different to anything else in the market.
